

App. No. 10/065,749

In the Claims:

All references to J2EE has been removed from the claims.

1-6 (cancelled)

7. (Previously presented) A system for software development comprising: which has a datasource manager manages the data, a client side component; a client system connecting to a server system, and a plurality of server side components.
8. (Previously presented) A system according to claim 7 in which the server side components includes one or more of a set of an Account and Users manager, a Project manager, a Source code compilation and run-time management, a Repository Manager, a Datasource Manager, a funtionality Center, a Requirements and Analysis center, a DrawBoard, and a Productivity Wizard.
9. (Previously presented) A system according to claim 8 in which said Account, Users manager manages a group of users the functionality related to said groups and users.
10. (Previously presented) A system according to claim 9 in which said managing function includes one or more of a group of adding/deleting accounts, adding/deleting users to accounts, modifying the user information and maintaining the account and user directories.
11. (Previously presented) A system according to claim 8 in which said Project manager manages Projects, their components and their related functionality.
12. (Previously presented) A system according to claim 11 in which said managing function includes one or more of a group of managing the projects' properties, adding projects, deleting projects, adding directories, deleting directories, adding files, and deleting files.

App. No. 10/065,749

13. (Previously presented) A system according to claim 8 in which said Source code compilation and run-time management manages the source code, its compilation and running.
14. (Previously presented) A system according to claim 8 in which said Repository Manager manages the java packages, projects and other resources in the account and its related activities.
15. (Previously presented) A system according to claim 8 in which said Datasource Manager manages the databases, database accounts, and other databases related functionality for the users.
16. (Previously presented) A system according to claim 15 in which said managing function includes one or more of a group of creating datasources, deleting datasources, modifying datasources, creating database accounts, modifying database accounts, deleting database accounts in said datasources, managing login and access and manipulating the data in said database accounts.
17. (modified) A system according to claim 8 in which said J2EE functionality Center manages the Webservices related functionality for the user.
18. (Previously presented) A system according to claim 8 in which said Requirements and Analysis center provides the Requirements and Analysis functionality for a project.
19. (Previously presented) A system according to claim 15 in which said managing function includes one or more of a group of letting the user describe the requirements, adding the project requirements, deleting the project requirements, modifying the project requirements, analyzing the project and designing the project.
20. (Previously presented) A system according to claim 8 in which said DrawBoard allows the users to draw the screens of the application.

App. No. 10/065,749

21. (Previously presented) A system according to claim 8 in which said Productivity Wizards is a collection of components that allows the user to create parts of their application in an easy way.
22. (Previously presented) A system according to claim 8 in which the client side connects to the server system using a LAN.
23. (Previously presented) A system according to claim 8 in which said client server is a stand alone system.
24. (Previously presented) A system according to claim 8 in which the client side connects to the server system using a WAN.
25. (Currently amended). A system for software development comprising: which has a datasource manager manages the data, a client side component; a client system connecting to a server system, a plurality of server side components in which the server side components includes one or more of a set of an Account and Users manager, a Project manager, a Source code compilation and run-time management, a Repository Manager, a Datasource Manager, a ~~J2EE~~ functionality Center, a Requirements and Analysis center, a DrawBoard, and a Productivity Wizard where said Account, Users manager manages a group of users the functionality related to said groups and users, where said Project manager manages Projects, their components and their related functionality, in which said managing function includes one or more of a group of managing the projects' properties, adding projects, deleting projects, adding directories, deleting directories, adding files, and deleting files, in which said Source code compilation and run-time management manages the source code, its compilation and running, in which said. Repository Manager manages the java packages, projects and other resources in the account and its related activities, in which said Datasource Manager manages the databases, database accounts, and other databases related functionality for the users, in which said managing function includes one or more of a group of creating

App. No. 10/065,749

datasources, deleting datasources, modifying datasources, creating database accounts, modifying database accounts, deleting database accounts in said datasources, managing login and Webservices related functionality for the user, in which said Requirements and Analysis center provides the Requirements and Analysis functionality for a project, in which said managing function includes one or more of a group of letting the user describe the requirements, adding the project requirements, deleting the project requirements, modifying the project requirements, analyzing the project and designing the project, in which said DrawBoard allows the users to draw the screens of the application, and in which said Productivity Wizards is a collection of components that allows the user to create parts of their application in an easy way.
